Fostering Inclusion

Assistive Device Catalogue

Svastya

A health initiative by GiftAble

Our Vision is to create an inclusive world
where people with disabilities find equal
opportunity in all aspects of life.

Introduction

World Health Organization (WHO) defines assistive products as any product, instrument, equipment adapted or specially designed for improving the functioning of a person with a disability.

Adaptive and assistive devices help an individual to maintain or improve their day to day functioning and help reduce dependence on caregivers. With the help of these devices, a person with a disability is empowered to participate in society at large, thereby going a long way in enhancing their overall well being.

"One size fits all" are long gone and we make sure every individual receives a device that fits their body, preferences, activities and lifestyle. We endeavor to provide customized devices to all our users. Once an order is placed with us, we take individual measurements, customize the device or devices and deliver it at your doorsteps, along with providing training on 'how to use this device?'

We are a call away!!
